

ONE SPOON AT A TIME

WORKING PROGRESS

1. Game Main Idea:

Our team created a 2D physics game about the life of a lonely old man. We chose Japan as the setting because it has one of the highest proportions of elderly people living alone. Our goal is to highlight the struggles seniors face in daily life, encouraging players to develop greater respect and empathy for them.

When brainstorming a title, we wanted something engaging and meaningful—capturing both the challenges and the theme of the game. This led us to **One Spoon at a Time**, emphasizing how even a simple act like eating can be difficult for the elderly.

2. Player Character:

We used simple Unity sprites and combined them to design a typical old man—bald, gray-haired, and frail. The art style is minimalistic but effectively suits the game's atmosphere.

3. Prototype

For the gameplay, we came up with many ideas and decided to use everyday activities, making them more challenging with physics-based mechanics. This approach highlights how simple tasks for young people can become extremely difficult for others, especially the elderly, due to factors like age and memory decline.

Finally, our team selected five main actions for the old man: walking upstairs, cutting bonsai, eating soup, hanging clothes, and applying eye drops.

Each member of our team is responsible for specific activities, ensuring that every aspect of the game is well-developed. We continuously brainstorm new ideas, refine the mechanics, and make improvements based on feedback.

4. Code

Before implementing the art, we started our project by focusing on the core mechanics first. Once the main code was completed, we shared it with teammates for review and refinements as needed. After that, we presented it to the class for further feedback and improvements.

5. Art Asset

Our team uses Aseprite for most of the game's objects, such as the hangers, clothes, phone, scissors, ... After that, we vectorize them so they fit seamlessly with other Unity sprites in the game.

6. Final Production

Finally, we refined and ensured that every script and game mechanic functioned smoothly, while also enhancing the visuals with VFX and lighting effects. Once these improvements were in place, we carried out thorough testing to confirm that the final build was completely free of errors or bugs, ensuring a seamless experience for players.
